

About the Job: Grow your career in this influential and high-impact role leading a team of engineers developing cutting-edge technology to improve lives. In this role, you will get to wear many hats and be responsible for managing and growing Gilero's satellite office in Chicago, IL including responsibility for P&L management, developing staff, resolving technical challenges, and helping to attract new business. You will oversee technical aspects of project objectives relating to the design and development of new medical devices and drug delivery systems. Join us in a collaborative and innovative environment where your contributions will make a real difference. You'll work with multiple clients across a variety of products to help shape the future of healthcare technology, ensuring products meet the highest standards and positively impact patient outcomes across the globe.

Duties: Actively manage product development team to ensure on-time deliverables, efficiency, and overall company metrics are being met. Lead and advise multi-disciplinary teams in the development of new products, primarily class I and class II single-use medical devices. Implement tools, methods, and procedures that improve Gilero's product development process. Provide guidance and direction to motivate team members to accomplish goals. Provide leadership that contributes to team growth and development. Monitor and ensure product development team utilization meets stated targets and ensure deliverables are being met on projects. Ensure team members comply with established QMS guidelines/procedures/work instructions. Work independently or in a team lead role to successfully drive projects to completion. Solve problems and think creatively. Communicate effectively with customers and vendors in a technical capacity. Review and approve proposed engineering designs, detailed drawings and subsequent product enhancements or changes. Balance company goals with project budgets, timelines, and staff availability. Support business development by meeting with clients, developing and reviewing proposals, etc. Support and lead company initiatives.

Skills/Qualifications: BS in Engineering, Mechanical and Biomedical preferred. Advanced degree a plus. 5+ years' experience in product development with medical device industry experience strongly preferred. Minimum 2 years of leadership experience (ex. Project Lead, Team Lead), prior supervisory experience a plus. Knowledge of medical device regulations

(FDA/ISO) a plusExcellent communication skills, writing skills and/or data analysisAbility to communicate effectively with customers and vendors in a technical capacityStrong project management skills with ability to work alone or in teamsKnowledge and experience designing for injection molding and high-volume automationExperience with CAD, Solidworks advanced modeling techniques preferredCompetent computer skills, including Excel and Word.
